EDUCATION

University of Arizona, W.A Franke Honors College

Bachelor of Science in Computer Science | Minors in Economics & Spanish

Tucson, Arizona

Expected May 2028

GPA: 4.0

Awards: Flinn Scholar, Hispanic Scholarship Fund Scholar, Hispanic Heritage Foundation: Silver in Technology, College Board National Hispanic Recognition Program Scholar, Arizona Seal of Biliteracy: Spanish, Dean's List with Distinction

Organizations: CS Ambassadors, Society of Hispanic Engineers, ColorStack, Intramural Basketball Champion

WORK EXPERIENCE

IBM Storage CTO's Office

Software Development Engineer Intern

Tucson, Arizona

May 2026 – Present

- Built and shipped an end-to-end Python agent for enterprise customers to identify their optimal distributed inference environment, reducing time to make million-dollar infrastructure purchases from weeks to hours
- Architected a multi-step agentic workflow to process natural language into parallel simulation runs with results in less than 7 minutes, summarizing key performance metrics with LLMs to make enterprise recommendations
- Developed modular unit tests for each component of the agent pipeline ensuring effectiveness before production
- Integrated 5 agent discovery tools for users to quickly understand how to interact with agent and tools
- Applied strong communication skills by demoing agent to 8 IBM researchers, writing an IBM-published blog, and delivering 3 presentations to an IBM Fellow and 2 Senior Technical Staff Members on KV-cache and RAG
- Product selected to be demoed at NVIDIA GTC Berlin in October and deployed for 50+ IBM sales reps

University of Arizona Athletics

Data Science Intern

Tucson, Arizona

October 2025 – Present

- Deployed 4 machine learning models trained on 100+ features across 8 seasons to estimate a player's on-field contribution, supporting Arizona Football's recruiting and financial decision-making for 21 transfer portal recruits
- Built a user-friendly Streamlit dashboard enabling scouts to filter, compare, and interpret player statistics through interactive charts and summaries, reducing the search for high-impact prospects at each position by up to 6x
- Architected a scalable data schema and ETL pipeline to ingest 200,000+ players into an Amazon Aurora PostgreSQL database, building Python loaders to boost team data analysis and optimize ML workflows
- Developed strong communication skills by collaborating with general managers, scouts, and financial directors

University of Arizona Department of Computer Science

Independent Student Research Intern

Tucson, Arizona

January 2025 – October 2025

- Created 2 novel basketball recruiting metrics that measure a player's team fit and on-court value, reducing positional search pools by up to 10x and identifying successful recruits with 50.56% greater accuracy than chance
- Curated a 35,000+ player SQLite database and ETL pipeline for data analysis and machine learning, scraping 363 team sites with BeautifulSoup, extracting player data using LLM APIs, and integrating with 4 online databases
- Built and deployed a FastAPI backend on Google Cloud with a React dashboard, communicating complex research findings through interactive visualizations for a 50+ non-basketball audience

SKILLS

Programming languages: Python, Java, SQL, R, Swift, TypeScript, JavaScript, Assembly, C, HTML/CSS, XML

Technologies: Git, GitHub, PostgreSQL, SQLite, SwiftData, Turso, pandas, NumPy, scikit-learn, Matplotlib, Docker, FastAPI, BeautifulSoup, ggplot2, Tidyverse, React Native, React, Google Cloud, Streamlit, Supabase, Claude, Codex

Courses: Data Structures & Algorithms, Software Development, Machine Learning, Linear Algebra, Statistics, Calculus

PROJECTS

Tendly – Berkeley AI Hackathon 2026

- Won 1st place by building a Python AI voice assistant for senior citizens in 24 hours using Claude and Devin, supporting basic computer task automation and building a dashboard for caregivers to prioritize requests

UA AI Studio - HackArizona 2026

- Built a RAG-powered AI teaching assistant that ingests classroom notes to deliver context-aware tutoring responses, using FastAPI for the backend and Supabase to store vector embeddings

FlowCode – CalHacks 2025

- Built an agentic task manager integrated inside of VSCode in 36 hours using Codex and Claude, automating task creation and completion so developers can focus on coding; deployed 3 agents to the Fetch.ai agentverse
