

Seth Rojas

skrojas@arizona.edu | (520) 307-4663 | github.com/sethrojas21 | linkedin.com/in/skrojas/

OBJECTIVE

Passionate software engineer with strong data structures and algorithms fundamentals, proven experience writing clean, object-oriented code, and clearly communicating work across technical teams and non-technical audiences.

EDUCATION

University of Arizona, W.A Franke Honors College

Tucson, Arizona

Bachelor of Science in Computer Science | Minors in Economics & Spanish

Expected May 2028

GPA: 4.0

Awards: Flinn Scholar, Hispanic Scholarship Fund Scholar, Hispanic Heritage Foundation: Silver in Technology, College Board National Hispanic Recognition Program Scholar, Arizona Seal of Biliteracy: Spanish, Dean's List with Distinction

Organizations: Society of Hispanic Engineers, ColorStack, Intramural Basketball Champion, MLB Pipeline Program

SKILLS

Programming languages: Java, Python, SQL, R, Swift, TypeScript, JavaScript, HTML/CSS, XML, Assembly, C

Technologies: Git, GitHub, PostgreSQL, SQLite, SwiftData, Turso, pandas, NumPy, scikit-learn, Matplotlib, Docker, FastAPI, BeautifulSoup, ggplot2, Tidyverse, React Native, React, Google Cloud, Streamlit, Supabase, VSCode, AWS

Courses: Data Structures & Algorithms, Software Development, Machine Learning, Linear Algebra, Statistics, Poetry

EXPERIENCE

University of Arizona Athletics

Tucson, Arizona

Analytics Intern

October 2025 – Present

- Led a fast-paced two-month transfer portal timeline, collaborating cross-functionally with the Arizona Football General Manager to build and ship player valuation ML models for a cloud-hosted Streamlit web dashboard
- Architected a scalable data schema and ETL pipeline for an Amazon Aurora PostgreSQL database, ingesting 200,000+ records into a data warehouse, and building Python loaders to filter and optimize SQL queries for ML
- Build strong problem-solving skills by engineering a valuation modeling pipeline scoring 5,000+ candidates using econometrics and machine learning, optimizing football recruiting strategy and supporting arbitration decisions
- Develop a collaborative mindset and strong communication skills by presenting analytics findings monthly to 6 non-technical stakeholders at AI committee meetings, learning from feedback to improve product usability
- Write clean and extensible code, maintaining project GitHub repository and MS Word written documentation

University of Arizona Department of Computer Science

Tucson, Arizona

Independent Student Research Intern

January 2025 – October 2025

- Committed to engineering 2 novel basketball recruiting metrics in R and Python using machine learning to quantify a player's fit and value, validated on 650+ players and achieving a 50.56% higher accuracy than chance
- Designed and built a 35,000+ SQLite database and ETL pipeline for querying and feature engineering, scraping 363 team sites with BeautifulSoup, extracting player data via LLM APIs, and integrating with 4 online databases
- Built and deployed a FastAPI backend on Google Cloud with a React and Turso web dashboard to support a poster presentation, translating research results into tables, visualizations, and clear summaries for 5 academics
- Presented project to 4 Athletics stakeholders, including the Chief Financial Officer, and 2 NBA data scientists

University of Arizona Department of Electrical and Computer Engineering

Tucson, Arizona

Mobile Application Developer Intern

June 2023 – August 2024

- Collaborated on a 3-person development team to build a Java healthcare stress management tracker that integrated live heart rate variability API data, 3 targeted yoga breathing exercises, and 2 post-session data visualizations

PROJECTS

UA AI Studio - HackArizona 2026

- Built a course-specific RAG LLM backend with FastAPI, Supabase vector search, and Gemini, creating APIs for document ingestion, embedding storage, memory-aware retrieval, and source-grounded chat responses.

FlowCode – CalHacks 2025

- Built a VSCode-integrated, agentic project manager on a 3-person team in 36 hours to streamline developer workflows, using Python and the Claude LLM API; deployed 3 agents on the Fetch.ai Agentverse

Snap Stats

- Engineered a native iOS basketball statistics application using Swift and SwiftData, designing data schemas, user navigation flows, and intuitive UI components to track live basketball games 50% faster than by hand
